<b>FOREWORD</b>	<b>iii</b>
<b>PREFACE</b>	<b>v</b>
<b>USER COMMENT FORM</b>	<b>vii</b>
<b>GLOSSARY</b>	<b>xv</b>
<b>1. INTRODUCTION</b>	<b>1</b>
1.1 Background	1
1.2 Development of This Handbook	2
1.3 Purpose of This Handbook	2
1.4 Scope and Limitations	3
1.5 Organization of This Handbook	3
<b>2. SEISMIC VULNERABILITY OF BUILDINGS</b>	<b>5</b>
2.0 Introduction	5
2.1 General Attributes of Structures	5
2.1.1 Strength	5
2.1.2 Stiffness	5
2.1.3 Ductility	6
2.1.4 Damping	6
2.2 Adverse Design and Construction Features	6
2.2.1 Lack of Direct Load Path	6
2.2.2 Irregularities	7
2.2.3 Lack of Redundancy	13
2.2.4 Lack of Toughness	13
2.2.5 Adjacent Buildings	14
2.3 Deteriorated Condition of Structural Materials	14
<b>3. SEISMIC STRENGTHENING OF EXISTING BUILDINGS</b>	<b>17</b>
3.0 Introduction	17
3.0.1 Cost Considerations	17
3.0.2 Functional Considerations	17
3.0.3 Aesthetic Considerations	18
3.0.4 Seismic Zonation	18
3.1 Vertical-resisting Elements--Moment Resisting Systems	18
3.1.1 Steel Moment Frames	18
3.1.2 Concrete Moment Frames	22
3.1.3 Moment Frames with Infills	26
3.1.4 Precast Concrete Moment Frames	28
3.2 Vertical-resisting Elements--Shear Walls	28
3.2.1 Reinforced Concrete or Reinforced Masonry Shear Walls	28
3.2.2 Precast Concrete Shear Walls	34
3.2.3 Unreinforced Masonry Shear Walls	34
3.2.4 Shear Walls in Wood Frame Buildings	37

3.3	Vertical-resisting Elements--Braced Frames	38
3.3.1	Steel Concentric Braced Frames	38
3.3.2	Rod or Other Tension Bracing	41
3.3.3	Eccentric Bracing	42
3.4	Vertical-resisting Elements--Adding Supplemental Members	43
3.4.1	Relative Compatibility	44
3.4.2	Exterior Supplemental Elements	45
3.4.3	Interior Supplemental Elements	45
3.5	Diaphragms	46
3.5.1	Timber Diaphragms	47
3.5.2	Concrete Diaphragms	51
3.5.3	Poured Gypsum Diaphragms	56
3.5.4	Precast Concrete Diaphragms	56
3.5.5	Steel Deck Diaphragms	59
3.5.6	Horizontal Steel Bracing	64
3.6	Foundations	65
3.6.1	Continuous or Strip Wall Footings	66
3.6.2	Individual Pier or Column Footings	68
3.6.3	Piles or Drilled Piers	70
3.6.4	Mat Foundations	72
3.7	Diaphragm to Vertical Element Connections	72
3.7.1	Connections of Timber Diaphragms	72
3.7.2	Connections of Concrete Diaphragms	84
3.7.3	Connections of Poured Gypsum Diaphragms	86
3.7.4	Connections of Precast Concrete Diaphragms	86
3.7.5	Connections of Steel Deck Diaphragms Without Concrete Fill	87
3.7.6	Connections of Steel Deck Diaphragms with Concrete Fill	89
3.7.7	Connections of Horizontal Steel Bracing	90
3.8	Vertical Element to Foundation Connections	91
3.8.1	Connections of Wood Stud Shear Walls	91
3.8.2	Connections of Metal Stud Shear Walls	95
3.8.3	Connections of Precast Concrete Shear Walls	95
3.8.4	Connections of Braced Frames	97
3.8.5	Connections of Steel Moment Frames	98
3.9	Adding a New Supplemental System	98
3.9.1	Supplemental Braced Frame System	99
3.9.2	New Shear Wall System	99
3.9.3	Structural Additions	101
4.	DECREASING DEMAND ON EXISTING SYSTEMS	103
4.0	Introduction	103
4.1	Reducing the Weight of the Building	103
4.2	Increasing the Fundamental Period and the Energy Dissipating Capacity of the Structural System	104
4.3	Alternate Procedures	105
4.3.1	Seismic Isolation	105
4.3.2	Supplemental Damping	105
5.	REHABILITATION OF NONSTRUCTURAL ARCHITECTURAL COMPONENTS	107
5.0	Introduction	107
5.1	Exterior Curtain Walls	107
5.2	Appendages	108
5.3	Veneers	109

5.4	Partitions	109
5.5	Ceilings	113
5.6	Lighting Fixtures	113
5.7	Glass Doors and Windows	114
5.8	Raised Computer Access Floors	115
<b>6.</b>	<b>REHABILITATION OF NONSTRUCTURAL MECHANICAL AND ELECTRICAL COMPONENTS</b>	<b>117</b>
6.0	Introduction	117
6.1	Mechanical and Electrical Equipment	117
6.2	Ductwork and Piping	126
6.3	Elevators	133
6.4	Emergency Power Systems	133
6.5	Hazardous Material Storage Systems	135
6.6	Communication Systems	137
6.7	Computer Equipment	137
	<b>BIBLIOGRAPHY</b>	<b>143</b>
	<b>APPENDICES</b>	
A	Seismic-Force-Resisting Elements in Buildings	149
B	Summary of Strengthening Techniques	165
C	Rehabilitation Examples	185
	<b>MINORITY OPINION</b>	<b>193</b>
	<b>BSSC BOARD OF DIRECTION AND MEMBER ORGANIZATIONS</b>	<b>195</b>
	<b>FIGURES</b>	
	LEGEND FOR FIGURES: (E) = Existing, (L) = Left, (N) = New, (R) = Right	
2.2.2.1	Vertical irregularities--examples of in-plane and out-of-plane discontinuities	8
2.2.2.4a	Horizontal and plan irregularities--rehabilitating a structure to reduce torsional loads	10
2.2.2.4b	Horizontal and plan irregularities--examples of rehabilitating buildings with re-entrant corners	11
2.2.2.4c	Horizontal and plan irregularities--example of strengthening a split level diaphragm	12
2.2.2.4d	Horizontal and plan irregularities--example of rehabilitating building with nonparallel systems	12
3.1.1.2a	Modification of an existing simple beam to a moment connection	19
3.1.1.2b	Strengthening an existing column	20
3.1.1.2c	Strengthening an existing beam	21
3.1.2.2a	Encasing an existing beam in concrete	23
3.1.2.2b	Strengthening an existing concrete column	24-25
3.1.2.2c	Strengthening an existing concrete frame building with a reinforced concrete shear wall	26
3.2.1.2a	Strengthening an existing shear wall by filling in existing openings	29
3.2.1.2b	Example of details for enclosing an existing opening in a reinforced concrete or masonry wall	30
3.2.1.2c	Strengthening an existing reinforced concrete or masonry wall	31
3.2.1.4	Example of strengthening an existing coupling beam at an exterior wall	32
3.2.3.2	Example of center coring technique	35
3.3	Bracing types	38
3.3.1.2	Addition to or replacement of an existing X-brace	39
3.4	Examples of supplementary strengthening	44
3.4.2	Example of supplemental in-plane strengthening by the addition of an external buttress	45
3.4.3	Connection of a supplemental interior shear wall	46

3.5.1.3	Exterior sheathing and top plate chord in a wood frame building	49
3.5.1.4a	Reinforcement of an opening in an existing timber diaphragm	50
3.5.1.4b	New drag strut in an existing wood diaphragm	51
3.5.2.2	Strengthening an existing concrete diaphragm with a new topping slab and chord	52
3.5.2.3	Adding a new chord member to an existing concrete diaphragm (not recommended for precast elements)	53
3.5.2.4a	Reinforcement of an opening in an existing concrete diaphragm	54
3.5.2.4b	Strengthening openings in overlaid diaphragms	55
3.5.4.2	Strengthening an existing precast concrete diaphragm with a concrete overlay	57
3.5.4.3	Adding a new steel member to an existing precast concrete diaphragm	58
3.5.5.2a	Strengthening an existing steel deck diaphragm	60
3.5.5.2b	Strengthening an existing steel deck diaphragm	61
3.5.5.2c	Strengthening an existing building with steel decking and concrete or masonry walls	62
3.5.5.2d	Strengthening an existing building with steel decking and concrete or masonry walls	63
3.6.1.2a	Underpinning an existing footing	66
3.6.1.2b	Strengthening an existing wall footing by the addition of drilled piers	67
3.6.2.3	Upgrading an existing pile foundation	71
3.7.1.2a	Strengthening the connection of a diaphragm to an interior shear wall (wall parallel to floor joist)	73
3.7.1.2b	Strengthening the connection of a diaphragm to an interior shear wall (wall perpendicular to floor joist)	74
3.7.1.3	Strengthening an existing wood stud shear wall with a large opening	76
3.7.1.4a	Strengthening out-of-plane connections of a wood diaphragm	77
3.7.1.4b	Strengthening out-of-plane connections of a wood diaphragm	78
3.7.1.4c	Strengthening out-of-plane connections of a wood diaphragm	79
3.7.1.4d	Strengthening out-of-plane connections of a wood diaphragm	80
3.7.1.4e	Strengthening tensile capacity of an existing glulam beam connection	80
3.7.1.5a	Strengthening the connection between shear walls using a metal strap	81
3.7.1.5b	Strengthening the connection between shear walls using a hold-down	82
3.7.1.5c	Strengthening shear wall uplift capacity at a discontinuity	83
3.7.2.2	Use of a collector member to improve shear transfer from a concrete diaphragm	85
3.7.5.2	Strengthening the connection of steel deck diaphragm to a concrete or masonry wall	88
3.8.1.2a	Providing wall to foundation anchors	92
3.8.1.2b	Alternate detail for providing wall to foundation anchors	93
3.8.1.3	Strengthening a cripple stud wall	94
3.8.1.4	Strengthening the uplift capacity of a wall to foundation connection	95
3.8.3.2	Strengthening a precast concrete wall to foundation connection	96
3.9.1	Strengthening using a supplemental braced frame system	99
3.9.2	Strengthening by providing a new shear wall system	100
3.9.3	Strengthening with a new building addition	101
5.1a	Flexible connection for precast concrete cladding	107
5.1b	Detail for flexible connection for precast concrete cladding	108
5.2a	Strengthening a masonry parapet with a new concrete overlay	109
5.2b	Strengthening a masonry parapet with steel braces	109
5.4a	Bracing an interior masonry partition	111
5.4b	Bracing an interior masonry partition	112
5.5	Lateral bracing of a suspended ceiling	113
5.6	Providing safety wires for suspended lighting fixtures	114
5.8a	Access floor pedestals	115
5.8b	Strengthening of access floor pedestals	116

6.1a	Typical detail of equipment anchorage	118
6.1b	Alternate details for anchoring equipment	119-120
6.1c	Prefabricated vibration isolation assembly with lateral seismic stops	121
6.1d	Seismic restraints added to existing equipment with vibration isolation	122
6.1e	Multidirectional seismic restraint	123
6.1f	Typical bracing for suspended equipment	124
6.1g	Strapping of domestic water heater	125
6.2a	Lateral and longitudinal braces for large diameter ducting	127
6.2b	Lateral and longitudinal braces for small diameter ducting	128
6.2c	Lateral and longitudinal braces for rectangular ducting	129
6.2d	Lateral braces for piping	130
6.2e	Longitudinal pipe brace	131
6.2f	Lateral brace for multiple pipes	132
6.2g	Longitudinal brace for multiple pipes	132
6.4a	Bracing of existing battery racks	133
6.4b	Bracing of horizontal tank	134
6.5a	Protective measures for hazardous materials	135
6.5b	Anchorage detail for pressurized tanks	136
6.7a	Rigid anchorage of computer equipment	138
6.7b	Flexible anchorage of computer equipment	139
6.7c	Tether and opening guards for protection of computer equipment	140
6.7d	Strapping of electronic data processing units	141
